EpiPly®

SPRAY/SPONGE/WIPE

SKIN PROTECTANT

Barrier film for the protection of skin

FOR EXTERNAL USE ONLY

DESCRIPTION

EpiPly Skin Protectant is a fast-drying, non-cytotoxic skin barrier film based on malonate polymer. EpiPly Skin Protectant forms a transparent, flexible, and breathable film. EpiPly Skin Protectant helps to protect intact or damaged skin from irritation caused by urine and/or fecal incontinence, digestive juices, wound drainage, adhesives, and friction and shear. It will wear off the skin and not require removal.

Ingredients: Malonate polymer 2.1.2, Dimethyl carbonate, Trimethoxy(methyl)silane

INDICATIONS FOR USE

EpiPly Skin Protectant is a film-forming product designed to protect intact or damaged skin, which acts as a barrier between the skin and bodily wastes and adhesive products. It also protects against friction and shear caused by clothing, shoes, or any materials that may damage the skin.

CONTRAINDICATIONS

EpiPly Skin Protectant is NOT to be used:

- as the only covering in situations that require dressing protection from bacterial contamination or penetration including deep, open, bleeding, or chronic wounds
- in or around the eyes
- infected areas of the skin

DIRECTIONS

1. Skin should be clean and dry prior to application of EpiPly Skin Protectant. Be sure to remove all traces of moisturizers, lotions, lotion soaps or waxes from the application area.
2. When applying EpiPly Spray: apply by holding the sprayer 8-12 cm from the skin, pressing the sprayer until a thin protective film is achieved on the affected area.
3. When applying EpiPly Sponge and EpiPly Wipe: remove from outer packaging and apply a sufficient amount until a thin protective film is achieved on the affected area.
4. Allow the product to dry for at least 30 seconds.
5. If additional product application is required after the first application, ensure that the first application is completely dry.
6. Ensure that EpiPly Skin Protectant has fully dried before covering it with clothing, adhesive products, dressings, or incontinence products.
7. If applying EpiPly Skin Protectant in a skin fold or another skin-to-skin contact area, separate the folds and allow the product to dry completely before returning the skin to its original position.
8. Cleanse the affected area as needed. Depending on the frequency of cleansing, additional applications may be necessary.
9. The film does not require removal and will wear off the skin. If desired, it can be removed by using a medical adhesive remover as directed.
10. For EpiPly Spray: replace the cap over spray nozzle when not in use to prevent accidental dispensing.

See reverse side for more information ►

WARNINGS AND PRECAUTIONS

- Product is FLAMMABLE until it has dried on the skin. Use in well-ventilated areas. Do not use near flames, ignition sources, or heat-producing devices.
- Avoid use on individuals allergic to any of the ingredients.
- Avoid applying on wet skin.
- The use of other barrier products, ointments, creams, or lotions may reduce the product's effectiveness.
- Should redness or other signs of irritation appear or persist, consult a physician.
- EpiPly Sponge and EpiPly Wipe are individually packaged for single use only. Reuse could result in increased risk of infection or inadequate product performance. The EpiPly Spray bottle is intended for single patient use.
- Keep out of reach of children.

STORAGE / SHELF-LIFE / DISPOSAL

Store at room temperature in a dry environment. Avoid sunlight and excessive heat.
For shelf life, refer to the expiration date on the packaging.
Dispose of according to local regulations.

HOW SUPPLIED

EpiPly Skin Protectant products are supplied sterile for single use only, unless the package is damaged or open. The contents of the spray bottle are sterile until initial use.

CAUTION: Federal (USA) law restricts this device to sale by or on the order of a physician (or properly licensed healthcare practitioner).
